My wife and I have lived at Lake Doster for over 27 years, raising both our kids here.

For the past 2 years I have been on the Board serving as its President. The accomplishments of the Board include:

- Getting the dredging project approved and started.
- Getting electronic voting approved and put into use.
- With the BCC, worked to develop dock plans with the goal that every lot that has rights to access the lake through a park has a mooring spot, this has been completed or in process for Park A, B, E, and Parkway.
- Worked with the BCC to set up inspections of the electrical systems at the lakeshore to insure all such installations are up to code, protecting those that swim and play in the lake.
- Developed guidelines for solar and wind turbine installations.
- Bringing the GDRC recommended bylaw changes to the membership for a vote.
- Worked through the Lake Liability Insurance issue after our former insurer notified us of not renewing our policy shortly before it expired.

On a more personal level:

- I was a member of the LEC, the dredging project team, prior to joining the Board.
- I have a BS in Engineering and an MBA from Notre Dame.
- 37 year working career, starting as an engineer, finishing as a VP with responsibilities over 2 manufacturing plants with over 300 employees.
- During that career:
  - Recycled Paperboard Technical Association Board of Directors Member 2000-2007.
  - Negotiated 12 union contracts, handled numerous union grievances and arbitrations. As a result, I have experience working with groups to reach agreement.
  - Worked with government agencies including the DEQ, EPA, and OSHA, dealing with permits and compliance.
- Currently retired.
- Good working knowledge of accounting and finance. As an engineer, I have experience in overseeing and managing small and large projects.

I would like to continue to be part of the board because I believe I can help the association move forward on the current problems and projects facing the Lake Association. This is a great place to live, and we can make it even better!
